

AFRICA ALPHA FUND

December 2012

IN ASSOCIATION WITH THE  Sanlam GROUP

Fund Overview

The objective of the Africa Alpha Fund is to provide long-term investors with active equity exposure to listed African companies within a valuation-driven, sustainable investment framework with the potential for material outperformance relative to a market-cap weighted index.

Investment Process

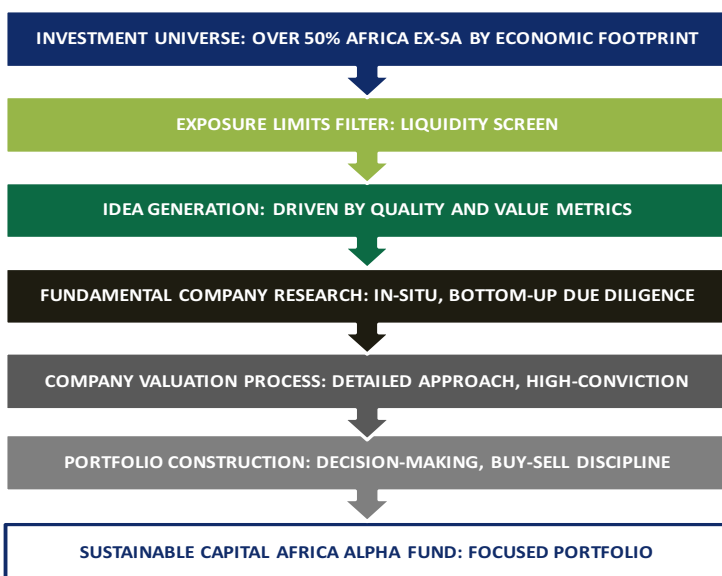

The aim of the investment process is to identify selected opportunities where the market price of a company has deviated materially from its fair value. Portfolio construction is driven by a disciplined, bottom-up research process with an emphasis on detailed, company-specific due diligence. The focus of idea generation is on high quality companies trading at below-average ratings.

Buy-sell discipline is led strictly by valuation using a long-term investment time horizon. Investment decision-making is informed by first-hand, proprietary data. Stock selection is informed by fundamental research conducted in-situ in African countries.

A company's position in the model portfolio is a function of the strength of the investment case, the level of conviction of the investment team, margin of safety (downside risk) and the extent of the discount (premium) to fair value.

Fund Manager

Sustainable Capital is an independent, owner-managed, responsible investment asset manager that specialises in the research and management of listed African equity securities, with total assets under management of USD 43.6m.
